FSWD • FULL STACK DEVELOPMENT **BEGINNER TO PRODUCTION ARCHITECT**

100% LIVE INDUSTRY EXPERT COHORT + INTERNSHIP LETTER

Full Stack MERN & TypeScript Cloud Engineering

Go from core JavaScript runtime mechanics to deploying distributed React + Node.js microservices with timed Mock Tests, Voice AI Interviews, and Module Capstones.

Duration: 18–20 Weeks • Live + Hands-On Projects (232 Hrs) • **Modules:** 14 • **Live Topics:** 42 • **Subtopics:** 336+ • **Labs & Tasks:** 82 • **Mocks / AI Vivas:** 84 / 84 • **Projects:** 14 Module + 1 Live Client Prod

Fixed Non-Negotiable Tuition Fee: Base Fee **₹7,999** + 18% GST (₹1,440) = **Total Incl. GST: ₹9,439** • **Effective ROI:** ~₹34/Guided Hr (~₹190/Live Topic)

Faculty: 100% Active Working IT Professionals • **Live Batch Tracks (7:00 AM – 8:00 PM IST Flexible Slots):** Weekday Live Online Batch (Mon – Fri • 1 Hr/Day • 7:00 AM – 8:00 PM) (Monday to Friday (1 Hour Live Session / Day) • 07:00 AM – 08:00 PM IST (Students Can Choose Any 1-Hour Slot Based on Trainer Availability) • 19–21 Weeks Fast-Track) | Weekend Live Online Batch (Sat – Sun • 2 Hrs/Day • 7:00 AM – 8:00 PM) (Saturday & Sunday (2 Hours Live Session / Day) • 07:00 AM – 08:00 PM IST (Students Can Choose Any 2-Hour Slot Based on Trainer Availability) • 21–23 Weeks Weekend Track)

✓ **Trainer LeetCode & HackerRank Mentorship (TypeScript 5 & JavaScript ES6+): Live trainer support to crack LeetCode & HackerRank problems, optimize complexity, and handle edge cases.**

Core Technologies & Engineering Stack: TypeScript • React 19 • Node.js • Express • MongoDB • Redis • Docker

1. PROGRAM MASTERY OUTCOMES & ELIGIBILITY

End-to-End Engineering Outcomes:

1. Understand V8 Event Loop, closures, async concurrency, and strict TypeScript generics
2. Architect scalable RESTful APIs with JWT rotation, rate limiting, and RBAC security
3. Build high-FPS React 19 interfaces with state machines, caching, and optimistic UI
4. Clear 42 Topic-Wise Timed Mock Exams and Voice AI Technical Interviews
5. Cohesive monorepo/workspace architecture sharing validated contracts between React 19 frontend and Node/Express APIs.
6. Crack LeetCode and HackerRank problems in TypeScript 5 & JavaScript ES6+ with live trainer mentorship on algorithmic/query patterns, edge cases, and optimal complexity.
7. Production authentication & multi-role RBAC using HttpOnly refresh tokens, CSRF/CORS protection, and secure middleware.
8. Indexed MongoDB document schemas, Aggregation Pipelines, Redis rate-limiting/caching, and S3 media upload flows.

Eligibility & Prerequisites: No prior Full Stack MERN & TypeScript Cloud Engineering industry experience required — Module 1 starts from environment setup, core mental models, and plain-English fundamentals. • Basic computer & internet familiarity on a Windows, macOS, or Linux laptop (8 GB+ RAM recommended for smooth live coding labs). • Ideal for B.Tech / BCA / MCA / B.Sc IT students, non-CS beginners, career switchers, and working developers upgrading to 2026 production standards. • Commitment to attend live Weekday or Weekend classes, complete daily hands-on lab checklists, and practice topic-wise Mock Tests & AI Interviews. • Dedication to write original code in your GitHub portfolio and complete the mentor-guided Live Client Production Sprint.

2. DETAILED ZERO-TO-EXPERT MODULE, TOPIC & SUBTOPIC SYLLABUS (14 MODULES • 42 LIVE TOPICS • 336+ SUBTOPICS)

Progressive Zero-to-Expert Mastery Stages: Modules 1–3: Stage 1: Day-1 Foundations & Core Mental Models (6 Topics / 48 Subtopics) • Modules 4–7: Stage 2: Applied Engineering, Data & API Workflows (14 Topics / 112 Subtopics) • Modules 8–11: Stage 3: Internals, Concurrency, Security & Performance (12 Topics / 96 Subtopics) • Modules 12–14: Stage 4: Production Architecture, Testing, CI/CD & Expert Mastery (10 Topics / 80 Subtopics)

MODULE 1 OF 14 • STAGE 1 • 24 LIVE + LAB HOURS • 1 TOPICS (8 SUBTOPICS) • 1 CAPSTONE PROJECT (100 MARKS)

JavaScript Runtime Internals & Strict TypeScript

Deep dive into V8 call stack, microtask queues, closures, and production TypeScript type safety.

Objectives: ✓ V8 Event Loop, Microtasks & Async Concurrency — How call stack, Web/Libuv APIs, Promise microtask queue, and macrotask timers execute. • ✓ Build, verify, and ship Module Capstone: Type-Safe Async Task Queue & Retry Engine.

1.1 V8 Event Loop, Microtasks & Async Concurrency [55 mins • Assignment (100M) • Hands-On Lab (50M) • 2 Mock Sets • 2 AI Vivas]

Subtopics Covered: 1. Call Stack • 2. Microtask Queue • 3. Macrotask Queue • Understanding the Single • Execution Priority Order • JavaScript executes synchronous frames on a single Call Stack while delegating I/O, timers, and network sockets to.... • Reproduce microtask queue starvation in a 20 • Measure timer drift using performance.now()

Purpose: To understand and apply V8 Event Loop, Microtasks & Async Concurrency in real Full Stack MERN & TypeScript Cloud Engineering systems — specifically: How call stack, Web/L...

What Topic Is Next → Module 1 Capstone (Type-Safe Async Task Queue & Retry Engine) → Next Topic 2.1: JWT Authentication, Refresh Rotation & OWASP API Security

Module 1 Hands-On Capstone Project (100 Marks): Type-Safe Async Task Queue & Retry Engine — Design and implement a zero-dependency TypeScript task scheduler supporting concurrency limits, exponential backoff retries, cancellation via AbortController, and event hooks.

MODULE 2 OF 14 • STAGE 1 • 32 LIVE + LAB HOURS • 1 TOPICS (8 SUBTOPICS) • 1 CAPSTONE PROJECT (100 MARKS)

Node.js, Express & Secure REST API Architecture

Middleware pipelines, JWT refresh token rotation, MongoDB indexing, and Redis caching.

Objectives: ✓ JWT Authentication, Refresh Rotation & OWASP API Security — Stateless vs stateful sessions, token revocation, CSRF/XSS defenses, and rate limiting. • ✓ Build, verify, and ship Module Capstone: Multi-Tenant RBAC API Gateway with Redis Rate Limiting.

2.1 JWT Authentication, Refresh Rotation & OWASP API Security [60 mins • 2 Mock Sets • 2 AI Vivas]

Subtopics Covered: Production API Authentication • Security Hygiene & Data Safety Rules for JWT Authentication, Refresh Rotation & OWASP API Security • Performance Optimization, Complexity & Latency Impact of JWT Authentication, Refresh Rotation & OWASP API Security • Live Debugging, Stack • JWT Authentication • Refresh Rotation • OWASP API Security • Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Internals, Complexity & Latency Optimization for JWT Authentication

Purpose: To understand and apply JWT Authentication, Refresh Rotation & OWASP API Security in real Full Stack MERN & TypeScript Cloud Engineering systems — specifically: Stateless...

What Topic Is Next → Module 2 Capstone (Multi-Tenant RBAC API Gateway with Redis Rate Limiting) → Next Topic 3.1: Semantic Document Landmarks & WCAG Screen-Reader Forms

Module 2 Hands-On Capstone Project (100 Marks): Multi-Tenant RBAC API Gateway with Redis Rate Limiting — Build an Express + TypeScript + MongoDB API featuring Argon2 password hashing, refresh token rotation, role-based access policies, and sliding-window rate limiting.

MODULE 3 OF 14 • STAGE 1 • 16 LIVE + LAB HOURS • 4 TOPICS (32 SUBTOPICS) • 1 CAPSTONE PROJECT (100 MARKS)

Semantic HTML5, Modern CSS3 Grid/Flexbox & Accessible Design Systems

Production-grade Full Stack MERN & TypeScript Cloud Engineering engineering module covering Semantic HTML5, Modern CSS3 Grid/Flexbox & Accessible Design Systems with hands-on labs and capstone build.

Objectives: ✓ Semantic Document Landmarks & WCAG Screen-Reader Forms — Purpose: Structure accessible web interfaces using semantic HTML5 elements and ARIA states. • ✓ CSS Flexbox, 2D Grid Dashboard Layouts & Container Queries — Purpose: Build fluid responsive SaaS dashboards that adapt cleanly from 320px mobile to 4K monitors. • ✓ Core Web Vitals (LCP, CLS, INP) & Critical Asset Optimization — Purpose: Eliminate layout jumps and slow initial paint on customer-facing web apps. • ✓ Utility-First Tailwind CSS Architecture & Reusable Variant Tokens — Purpose: Build maintainable responsive UI components rapidly without stylesheet bloat.

3.1 Semantic Document Landmarks & WCAG Screen-Reader Forms [65 mins • Assignment (100M) • Hands-On Lab (50M) • 2 Mock Sets • 2 AI Vivas]

Subtopics Covered: Landmarks (<header>, <main>, <nav>, <section>) • Accessible Form Labels, Fieldsets & Validation States • Keyboard Focus Traps & Skip-Navigation Patterns • Under-the-Hood Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle • Boundary Validation, HttpOnly rotating JWTs, Zod boundary schemas, Helmet & OWASP BOLA guards & Failure Recovery • Automated Vitest, Supertest & Playwright E2E Verification & Senior Viva Trade-Offs • Idiomatic FSWD Implementation: strict TypeScript contracts, non-blocking I/O, idempotency keys & Redis cachin... • Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle for Semantic Document Landmarks

Purpose: To understand and apply Semantic Document Landmarks & WCAG Screen-Reader Forms in real Full Stack MERN & TypeScript Cloud Engineering systems — specifically: Structure ac...

What Topic Is Next → Next Topic 3.2: CSS Flexbox, 2D Grid Dashboard Layouts & Container Queries

3.2 CSS Flexbox, 2D Grid Dashboard Layouts & Container Queries [65 mins • Assignment (100M) • Hands-On Lab (50M) • 2 Mock Sets • 2 AI Vivas]

Subtopics Covered: 1D Flexbox Alignment vs 2D CSS Grid Template Areas • CSS Custom Properties (Design Tokens) & Dark Mode Themes • Container Queries (@container) & Fluid clamp() Typography • Under-the-Hood Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle • Boundary Validation, HttpOnly rotating JWTs, Zod boundary schemas, Helmet & OWASP BOLA guards & Failure Recovery • Automated Vitest, Supertest & Playwright E2E Verification & Senior Viva Trade-Offs • Idiomatic FSWD Implementation: strict TypeScript contracts, non-blocking I/O, idempotency keys & Redis cachin... • Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle for CSS Flexbox

Purpose: To understand and apply CSS Flexbox, 2D Grid Dashboard Layouts & Container Queries in real Full Stack MERN & TypeScript Cloud Engineering systems — specifically: Build fl...

What Topic Is Next → Next Topic 3.3: Core Web Vitals (LCP, CLS, INP) & Critical Asset Optimization

3.3 Core Web Vitals (LCP, CLS, INP) & Critical Asset Optimization [65 mins • Assignment (100M) • Hands-On Lab (50M) • 2 Mock Sets • 2 AI Vivas]

Subtopics Covered: Eliminating Cumulative Layout Shift (CLS) with Aspect Ratios • Optimizing Largest Contentful Paint (LCP) & Responsive WebP/AVIF • Interaction to Next Paint (INP) & Non-Blocking UI Updates • Under-the-Hood Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle • Boundary Validation, HttpOnly rotating JWTs, Zod boundary schemas, Helmet & OWASP BOLA guards & Failure Recovery • Automated Vitest, Supertest & Playwright E2E Verification & Senior Viva Trade-Offs • Idiomatic FSWD Implementation: strict TypeScript contracts, non-blocking I/O, idempotency keys & Redis cachin... • Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle for Core Web Vitals (LCP, CLS, INP)

Purpose: To understand and apply Core Web Vitals (LCP, CLS, INP) & Critical Asset Optimization in real Full Stack MERN & TypeScript Cloud Engineering systems — specifically: Elimi...

What Topic Is Next → Next Topic 3.4: Utility-First Tailwind CSS Architecture & Reusable Variant Tokens

3.4 Utility-First Tailwind CSS Architecture & Reusable Variant Tokens [65 mins • Assignment (100M) • Hands-On Lab (50M) • 2 Mock Sets • 2 AI Vivas]

Subtopics Covered: Composable Utility Variants (Size, Tone & Disabled States) • Responsive Breakpoints (sm/md/lg/xl) & Mobile-First Ergonomics • Purging Unused Styles & Sub-20KB Gzipped Production Bundles • Under-the-Hood Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle • Boundary Validation, HttpOnly rotating JWTs, Zod boundary schemas, Helmet & OWASP BOLA guards & Failure Recovery • Automated Vitest, Supertest & Playwright E2E Verification & Senior Viva Trade-Offs • Idiomatic FSWD Implementation: strict TypeScript contracts, non-blocking I/O, idempotency keys & Redis cachin... • Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle for Utility-First Tailwind CSS Architecture

Purpose: To understand and apply Utility-First Tailwind CSS Architecture & Reusable Variant Tokens in real Full Stack MERN & TypeScript Cloud Engineering systems — specifically: B...

What Topic Is Next → Module 3 Capstone (Responsive Multi-Theme SaaS Design System & Accessible Shell) → Next Topic 4.1: Discriminated Unions, Exhaustive Type Narrowing & Type Guards

Module 3 Hands-On Capstone Project (100 Marks): Responsive Multi-Theme SaaS Design System & Accessible Shell — Design, implement, test, and document 'Responsive Multi-Theme SaaS Design System & Accessible Shell' applying every production concept from Module 3 (Semantic HTML5, Modern CSS3 Grid/Flexbox...

MODULE 4 OF 14 • STAGE 2 • 16 LIVE + LAB HOURS • 4 TOPICS (32 SUBTOPICS) • 1 CAPSTONE PROJECT (100 MARKS)

Strict TypeScript Engineering: Generics, Narrowing & Runtime Contracts

Production-grade Full Stack MERN & TypeScript Cloud Engineering engineering module covering Strict TypeScript Engineering: Generics, Narrowing & Runtime Contracts with hands-on labs and capstone build.

Objectives: ✓ Discriminated Unions, Exhaustive Type Narrowing & Type Guards — Purpose: Eliminate undefined/null crashes across frontend and backend codebases at compile time. • ✓ Generic Constraints, Mapped Utility Types & Template Literal Types — Purpose: Write reusable, DRY TypeScript data layers without resorting to unsafe any casts. • ✓ Runtime Boundary Validation with Zod & Shared Monorepo Contracts — Purpose: Bridge compile-time TypeScript types with live runtime request validation. • ✓ Strict TSConfig Compiler Flags, ESM Bundling & Path Aliases — Purpose: Configure enterprise-grade TypeScript build pipelines for Node.js and Vite.

4.1 Discriminated Unions, Exhaustive Type Narrowing & Type Guards [65 mins • Assignment (100M) • Hands-On Lab (50M) • 2 Mock Sets • 2 AI Vivas]

Subtopics Covered: Discriminated State Unions (loading | success | error) • Custom User-Defined Type Predicates (val is User) • Exhaustiveness Checking with the never Type • Under-the-Hood Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle • Boundary Validation, HttpOnly rotating JWTs, Zod boundary schemas, Helmet & OWASP BOLA guards & Failure Recovery • Automated Vitest, Supertest & Playwright E2E Verification & Senior Viva Trade-Offs • Idiomatic FSWD Implementation: strict TypeScript contracts, non-blocking I/O, idempotency keys & Redis cachin... • Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle for Discriminated Unions

Purpose: To understand and apply Discriminated Unions, Exhaustive Type Narrowing & Type Guards in real Full Stack MERN & TypeScript Cloud Engineering systems — specifically: Elimi...

What Topic Is Next → Next Topic 4.2: Generic Constraints, Mapped Utility Types & Template Literal Types

4.2 Generic Constraints, Mapped Utility Types & Template Literal Types [65 mins • Assignment (100M) • Hands-On Lab (50M) • 2 Mock Sets • 2 AI Vivas]

Subtopics Covered: Generic Constraints (<T extends { id: string }>) • Built-In & Custom Mapped Types (Pick, Omit, Partial, Readonly) • Template Literal Event & Route Types • Under-the-Hood Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle • Boundary Validation, HttpOnly rotating JWTs, Zod boundary schemas, Helmet & OWASP BOLA guards & Failure Recovery • Automated Vitest, Supertest & Playwright E2E Verification & Senior Viva Trade-Offs • Idiomatic FSWD Implementation: strict TypeScript contracts, non-blocking I/O, idempotency keys & Redis cachin... • Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle for Generic Constraints

Purpose: To understand and apply Generic Constraints, Mapped Utility Types & Template Literal Types in real Full Stack MERN & TypeScript Cloud Engineering systems — specifically:...

What Topic Is Next → Next Topic 4.3: Runtime Boundary Validation with Zod & Shared Monorepo Contracts

4.3 Runtime Boundary Validation with Zod & Shared Monorepo Contracts [65 mins • Assignment (100M) • Hands-On Lab (50M) • 2 Mock Sets • 2 AI Vivas]

Subtopics Covered: Zod Schema Parsing (.safeParse) & Inferred z.infer<typeof Schema> • Environment Variable Validation at Server Startup • Typed Error Envelopes & Problem-Details Responses • Under-the-Hood Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle • Boundary Validation, HttpOnly rotating JWTs, Zod boundary schemas, Helmet & OWASP BOLA guards & Failure Recovery • Automated Vitest, Supertest & Playwright E2E Verification & Senior Viva Trade-Offs • Idiomatic FSWD Implementation: strict TypeScript contracts, non-blocking I/O, idempotency keys & Redis cachin... • Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle for Runtime Boundary Validation with Zod

Purpose: To understand and apply Runtime Boundary Validation with Zod & Shared Monorepo Contracts in real Full Stack MERN & TypeScript Cloud Engineering systems — specifically: Br...

What Topic Is Next → Next Topic 4.4: Strict TSConfig Compiler Flags, ESM Bundling & Path Aliases

4.4 Strict TSConfig Compiler Flags, ESM Bundling & Path Aliases [65 mins • Assignment (100M) • Hands-On Lab (50M) • 2 Mock Sets • 2 AI Vivas]

Subtopics Covered: strictNullChecks, noUncheckedIndexedAccess & exactOptionalPropertyTypes • ECMAScript Modules (ESM) vs CommonJS Interop • Incremental Typechecking & Project References • Under-the-Hood Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle • Boundary Validation, HttpOnly rotating JWTs, Zod boundary schemas, Helmet & OWASP BOLA guards & Failure Recovery • Automated Vitest, Supertest & Playwright E2E Verification & Senior Viva Trade-Offs • Idiomatic FSWD Implementation: strict TypeScript contracts, non-blocking I/O, idempotency keys & Redis cachin... • Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle for Strict TSConfig Compiler Flags

Purpose: To understand and apply Strict TSConfig Compiler Flags, ESM Bundling & Path Aliases in real Full Stack MERN & TypeScript Cloud Engineering systems — specifically: Configu...

What Topic Is Next → Module 4 Capstone (End-to-End Type-Safe API SDK & Schema Validator Library) → Next Topic 5.1: React Fiber Reconciliation, Keys & Declarative State Mental Model

Module 4 Hands-On Capstone Project (100 Marks): End-to-End Type-Safe API SDK & Schema Validator Library — Design, implement, test, and document 'End-to-End Type-Safe API SDK & Schema Validator Library' applying every production concept from Module 4 (Strict TypeScript Engineering: Generics, Narr...

MODULE 5 OF 14 • STAGE 2 • 16 LIVE + LAB HOURS • 4 TOPICS (32 SUBTOPICS) • 1 CAPSTONE PROJECT (100 MARKS)

React 19 Component Architecture, Reconciliation & Custom Hooks

Production-grade Full Stack MERN & TypeScript Cloud Engineering engineering module covering React 19 Component Architecture, Reconciliation & Custom Hooks with hands-on labs and capstone build.

Objectives: ✓ React Fiber Reconciliation, Keys & Declarative State Mental Model — Purpose: Understand how React updates the DOM efficiently and avoid subtle state reset bugs. • ✓ Lifecycle Synchronization with useEffect, Cleanup & AbortController — Purpose: Fetch remote data, subscribe to sockets, and clean up timers without memory leaks. • ✓ Error Boundaries, Suspense Code-Splitting & Render Optimization — Purpose: Keep large React SPAs fast on slow networks and resilient when individual widgets fail. • ✓ Compound Components, Headless Portals & Accessible Modals — Purpose: Architect reusable enterprise component libraries used by multiple product squads.

5.1 React Fiber Reconciliation, Keys & Declarative State Mental Model [65 mins • Assignment (100M) • Hands-On Lab (50M) • 2 Mock Sets • 2 AI Vivas]

Subtopics Covered: Virtual DOM Diffing & Stable List Keys • Controlled vs Uncontrolled Inputs & Ref Forwarding • Pure Render Functions & Idempotent UI Components • Under-the-Hood Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle • Boundary Validation, HttpOnly rotating JWTs, Zod boundary schemas, Helmet & OWASP BOLA guards & Failure Recovery • Automated Vitest, Supertest & Playwright E2E Verification & Senior Viva Trade-Offs • Idiomatic FSWD Implementation: strict TypeScript contracts, non-blocking I/O, idempotency keys & Redis cachin... • Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle for React Fiber Reconciliation

Purpose: To understand and apply React Fiber Reconciliation, Keys & Declarative State Mental Model in real Full Stack MERN & TypeScript Cloud Engineering systems — specifically: U...

What Topic Is Next → Next Topic 5.2: Lifecycle Synchronization with useEffect, Cleanup & AbortController

5.2 Lifecycle Synchronization with useEffect, Cleanup & AbortController [65 mins • Assignment (100M) • Hands-On Lab (50M) • 2 Mock Sets • 2 AI Vivas]

Subtopics Covered: Effect Dependency Arrays & Stale Closure Prevention • Cancelling In-Flight Requests with AbortController • Extracting Domain Logic into Testable Custom Hooks • Under-the-Hood Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle • Boundary Validation, HttpOnly rotating JWTs, Zod boundary schemas, Helmet & OWASP BOLA guards & Failure Recovery • Automated Vitest, Supertest & Playwright E2E Verification & Senior Viva Trade-Offs • Idiomatic FSWD Implementation: strict TypeScript contracts, non-blocking I/O, idempotency keys & Redis cachin... • Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle for Lifecycle Synchronization with useEffect

Purpose: To understand and apply Lifecycle Synchronization with useEffect, Cleanup & AbortController in real Full Stack MERN & TypeScript Cloud Engineering systems — specifically:...

What Topic Is Next → Next Topic 5.3: Error Boundaries, Suspense Code-Splitting & Render Optimization

5.3 Error Boundaries, Suspense Code-Splitting & Render Optimization [65 mins • Assignment (100M) • Hands-On Lab (50M) • 2 Mock Sets • 2 AI Vivas]

Subtopics Covered: Route-Level Lazy Loading (React.lazy + Suspense) • Fault Isolation with Granular Error Boundaries • Profiling Re-Renders, useMemo, useCallback & List Virtualization • Under-the-Hood Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle • Boundary Validation, HttpOnly rotating JWTs, Zod boundary schemas, Helmet & OWASP BOLA guards & Failure Recovery • Automated Vitest, Supertest & Playwright E2E Verification & Senior Viva Trade-Offs • Idiomatic FSWD Implementation: strict TypeScript contracts, non-blocking I/O, idempotency keys & Redis cachin... • Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle for Error Boundaries

Purpose: To understand and apply Error Boundaries, Suspense Code-Splitting & Render Optimization in real Full Stack MERN & TypeScript Cloud Engineering systems — specifically: Kee...

What Topic Is Next → Next Topic 5.4: Compound Components, Headless Portals & Accessible Modals

5.4 Compound Components, Headless Portals & Accessible Modals [65 mins • Assignment (100M) • Hands-On Lab (50M) • 2 Mock Sets • 2 AI Vivas]

Subtopics Covered: Compound Component Pattern (Tabs, Accordion, Dropdown) • React Portals for Modals, Drawers & Toast Notifications • Optimistic UI Transitions & Form Pending Indicators • Under-the-Hood Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle • Boundary Validation, HttpOnly rotating JWTs, Zod boundary schemas, Helmet & OWASP BOLA guards & Failure Recovery • Automated Vitest, Supertest & Playwright E2E Verification & Senior Viva Trade-Offs • Idiomatic FSWD Implementation: strict TypeScript contracts, non-blocking I/O, idempotency keys & Redis cachin... • Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle for Compound Components

Purpose: To understand and apply Compound Components, Headless Portals & Accessible Modals in real Full Stack MERN & TypeScript Cloud Engineering systems — specifically: Architect...

What Topic Is Next → Module 5 Capstone (Modular Multi-Step SaaS Onboarding & Dynamic Form Builder) → Next Topic 6.1: Client State vs Server Cache Architecture with TanStack Query

Module 5 Hands-On Capstone Project (100 Marks): Modular Multi-Step SaaS Onboarding & Dynamic Form Builder — Design, implement, test, and document 'Modular Multi-Step SaaS Onboarding & Dynamic Form Builder' applying every production concept from Module 5 (React 19 Component Architecture, Reconcilia...

MODULE 6 OF 14 • STAGE 2 • 14 LIVE + LAB HOURS • 3 TOPICS (24 SUBTOPICS) • 1 CAPSTONE PROJECT (100 MARKS)

Enterprise Frontend State: Redux Toolkit, TanStack Query & Protected Routing

Production-grade Full Stack MERN & TypeScript Cloud Engineering engineering module covering Enterprise Frontend State: Redux Toolkit, TanStack Query & Protected Routing with hands-on labs and capstone build.

Objectives: ✓ Client State vs Server Cache Architecture with TanStack Query — Separate ephemeral UI toggles from cached backend data with automatic background revalidation. • ✓ Predictable Global Store Design with Redux Toolkit & Selectors — Manage complex cross-screen client workflows like multi-item carts and studio editors. • ✓ Protected Role-Based Routing, URL Search State & Session Refresh — Synchronize filters with shareable URLs and handle silent JWT token renewal seamlessly. • ✓ Build, verify, and ship Module Capstone: Real-Time Operations Console with Optimistic Caching & RBAC Routes.

6.1 Client State vs Server Cache Architecture with TanStack Query [65 mins • Assignment (100M) • Hands-On Lab (50M) • 2 Mock Sets • 2 AI Vivas]

Subtopics Covered: Query Keys, Stale-While-Revalidate & Cache Invalidation • Optimistic Updates & Automatic Rollback on Mutation Failure • Cursor Infinite Scroll & Prefetched Pagination • Under-the-Hood Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle • Boundary Validation, HttpOnly rotating JWTs, Zod boundary schemas, Helmet & OWASP BOLA guards & Failure Recovery • Automated Vitest, Supertest & Playwright E2E Verification & Senior Viva Trade-Offs • Idiomatic FSWD Implementation: strict TypeScript contracts, non-blocking I/O, idempotency keys & Redis cachin... • Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle for Client State vs Server Cache Architecture with TanSt...

Purpose: To understand and apply Client State vs Server Cache Architecture with TanStack Query in real Full Stack MERN & TypeScript Cloud Engineering systems — specifically: Separ...

What Topic Is Next → Next Topic 6.2: Predictable Global Store Design with Redux Toolkit & Selectors

6.2 Predictable Global Store Design with Redux Toolkit & Selectors [65 mins • Assignment (100M) • Hands-On Lab (50M) • 2 Mock Sets • 2 AI Vivas]

Subtopics Covered: createSlice, Immer Immutable Updates & Normalized Entity Adapters • Memoized Reselect Selectors • Middleware & DevTools Time-Travel Debugging • Under-the-Hood Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle • Boundary Validation, HttpOnly rotating JWTs, Zod boundary schemas, Helmet & OWASP BOLA guards & Failure Recovery • Automated Vitest, Supertest & Playwright E2E Verification & Senior Viva Trade-Offs • Idiomatic FSWD Implementation: strict TypeScript contracts, non-blocking I/O, idempotency keys & Redis cachin... • Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle for Predictable Global Store Design with Redux Toolkit

Purpose: To understand and apply Predictable Global Store Design with Redux Toolkit & Selectors in real Full Stack MERN & TypeScript Cloud Engineering systems — specifically: Mana...

What Topic Is Next → Next Topic 6.3: Protected Role-Based Routing, URL Search State & Session Refresh

6.3 Protected Role-Based Routing, URL Search State & Session Refresh [65 mins • Assignment (100M) • Hands-On Lab (50M) • 2 Mock Sets • 2 AI Vivas]

Subtopics Covered: Role-Guarded Route Wrappers & Deep-Link Redirects • URL Search Params as Shareable Filter State • Axios/Fetch Interceptor Queue for Silent Token Refresh • Under-the-Hood Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle • Boundary Validation, HttpOnly rotating JWTs, Zod boundary schemas, Helmet & OWASP BOLA guards & Failure Recovery • Automated Vitest, Supertest & Playwright E2E Verification & Senior Viva Trade-Offs • Idiomatic FSWD Implementation: strict TypeScript contracts, non-blocking I/O, idempotency keys & Redis cachin... • Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle for Protected Role-Based Routing

Purpose: To understand and apply Protected Role-Based Routing, URL Search State & Session Refresh in real Full Stack MERN & TypeScript Cloud Engineering systems — specifically: Sy...

What Topic Is Next → Module 6 Capstone (Real-Time Operations Console with Optimistic Caching & RBAC Routes) → Next Topic 7.1: Node.js Readable/Writable/Transform Streams & Backpressure

Module 6 Hands-On Capstone Project (100 Marks): Real-Time Operations Console with Optimistic Caching & RBAC Routes — Design, implement, test, and document 'Real-Time Operations Console with Optimistic Caching & RBAC Routes' applying every production concept from Module 6 (Enterprise Frontend State: Redux T...

MODULE 7 OF 14 • STAGE 2 • 14 LIVE + LAB HOURS • 3 TOPICS (24 SUBTOPICS) • 1 CAPSTONE PROJECT (100 MARKS)

Node.js Runtime Internals, Streams, Worker Threads & File Pipelines

Production-grade Full Stack MERN & TypeScript Cloud Engineering engineering module covering Node.js Runtime Internals, Streams, Worker Threads & File Pipelines with hands-on labs and capstone build.

Objectives: ✓ Node.js Readable/Writable/Transform Streams & Backpressure — Process multi-gigabyte uploads and exports in constant RAM without crashing containers. • ✓ CPU Offloading with Worker Threads, Child Processes & Cluster Mode — Keep the Node.js event loop responsive during PDF generation, hashing, and report crunching. • ✓ Structured Pino JSON Logging, AsyncLocalStorage & Request Tracing — Trace every log line and DB query belonging to a single customer request across async calls. • ✓ Build, verify, and ship Module Capstone: High-Throughput CSV/Log Streaming Ingestion & Worker Pool Engine.

7.1 Node.js Readable/Writable/Transform Streams & Backpressure [65 mins • Assignment (100M) • Hands-On Lab (50M) • 2 Mock Sets • 2 AI Vivas]

Subtopics Covered: stream.pipeline() & Automatic File Descriptor Cleanup • Handling Backpressure (.write() false & drain Events) • Streaming NDJSON / CSV Exports Directly to HTTP Responses • Under-the-Hood Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle • Boundary

Validation, HttpOnly rotating JWTs, Zod boundary schemas, Helmet & OWASP BOLA guards & Failure Recovery • Automated Vitest, Supertest & Playwright E2E Verification & Senior Viva Trade-Offs • Idiomatic FSWD Implementation: strict TypeScript contracts, non-blocking I/O, idempotency keys & Redis cachin... • Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle for Node.js Readable/Writable/Transform Streams

Purpose: To understand and apply Node.js Readable/Writable/Transform Streams & Backpressure in real Full Stack MERN & TypeScript Cloud Engineering systems — specifically: Process...

What Topic Is Next → Next Topic 7.2: CPU Offloading with Worker Threads, Child Processes & Cluster Mode

7.2 CPU Offloading with Worker Threads, Child Processes & Cluster Mode [65 mins • Assignment (100M) • Hands-On Lab (50M) • 2 Mock Sets • 2 AI Vivas]

Subtopics Covered: Worker Thread Pools & SharedArrayBuffer / MessagePort • Graceful Shutdown on SIGTERM / SIGINT Signals • Buffers, Binary Encodings & Cryptographic HMAC Digests • Under-the-Hood Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle • Boundary Validation, HttpOnly rotating JWTs, Zod boundary schemas, Helmet & OWASP BOLA guards & Failure Recovery • Automated Vitest, Supertest & Playwright E2E Verification & Senior Viva Trade-Offs • Idiomatic FSWD Implementation: strict TypeScript contracts, non-blocking I/O, idempotency keys & Redis cachin... • Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle for CPU Offloading with Worker Threads

Purpose: To understand and apply CPU Offloading with Worker Threads, Child Processes & Cluster Mode in real Full Stack MERN & TypeScript Cloud Engineering systems — specifically:...

What Topic Is Next → Next Topic 7.3: Structured Pino JSON Logging, AsyncLocalStorage & Request Tracing

7.3 Structured Pino JSON Logging, AsyncLocalStorage & Request Tracing [65 mins • Assignment (100M) • Hands-On Lab (50M) • 2 Mock Sets • 2 AI Vivas]

Subtopics Covered: Correlation Request IDs via AsyncLocalStorage • Redacting PII & Secrets from Structured Logs • Uncaught Rejection Policies & Health Check Endpoints • Under-the-Hood Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle • Boundary Validation, HttpOnly rotating JWTs, Zod boundary schemas, Helmet & OWASP BOLA guards & Failure Recovery • Automated Vitest, Supertest & Playwright E2E Verification & Senior Viva Trade-Offs • Idiomatic FSWD Implementation: strict TypeScript contracts, non-blocking I/O, idempotency keys & Redis cachin... • Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle for Structured Pino JSON Logging

Purpose: To understand and apply Structured Pino JSON Logging, AsyncLocalStorage & Request Tracing in real Full Stack MERN & TypeScript Cloud Engineering systems — specifically: T...

Module 7 Hands-On Capstone Project (100 Marks): High-Throughput CSV/Log Streaming Ingestion & Worker Pool Engine — Design, implement, test, and document 'High-Throughput CSV/Log Streaming Ingestion & Worker Pool Engine' applying every production concept from Module 7 (Node.js Runtime Internals, Streams,...

MODULE 8 OF 14 • STAGE 3 • 14 LIVE + LAB HOURS • 3 TOPICS (24 SUBTOPICS) • 1 CAPSTONE PROJECT (100 MARKS)

Production Express/REST API Engineering, Security Hardening & Idempotency

Production-grade Full Stack MERN & TypeScript Cloud Engineering engineering module covering Production Express/REST API Engineering, Security Hardening & Idempotency with hands-on labs and capstone build.

Objectives: ✓ Layered Controller–Service–Repository Architecture & Domain Errors — Organize Express backends so business rules stay decoupled from HTTP transport details. • ✓ OWASP API Security: Helmet, CORS, CSRF, XSS & Injection Defense — Harden Node.js APIs against the exact attack vectors exploited in real security breaches. • ✓ Idempotency Keys, Cursor Pagination & OpenAPI 3.1 Contracts — Prevent double-charging payments and slow offset queries on multi-million-row endpoints. • ✓ Build, verify, and ship Module Capstone: Hardened B2B Billing & Webhook API with Idempotency Keys.

8.1 Layered Controller–Service–Repository Architecture & Domain Errors [65 mins • Assignment (100M) • Hands-On Lab (50M) • 2 Mock Sets • 2 AI Vivas]

Subtopics Covered: Thin Controllers, Pure Domain Services & Data Repositories • Centralized Error-Handling Middleware & RFC 7807 Problem JSON • API Versioning (/api/v1) & Backward-Compatible Deprecation • Under-the-Hood Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle • Boundary Validation, HttpOnly rotating JWTs, Zod boundary schemas, Helmet & OWASP BOLA guards & Failure Recovery • Automated Vitest, Supertest & Playwright E2E Verification & Senior Viva Trade-Offs • Idiomatic FSWD Implementation: strict TypeScript contracts, non-blocking I/O, idempotency keys & Redis cachin... • Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle for Layered Controller–Service–Repository Architecture

Purpose: To understand and apply Layered Controller–Service–Repository Architecture & Domain Errors in real Full Stack MERN & TypeScript Cloud Engineering systems — specifically:...

MongoDB Data Modeling, Aggregation Pipelines, Indexing & Transactions

Production-grade Full Stack MERN & TypeScript Cloud Engineering engineering module covering MongoDB Data Modeling, Aggregation Pipelines, Indexing & Transactions with hands-on labs and capstone build.

Objectives: ✓ Schema Design Patterns: Embedding vs Referencing & Polymorphic Docs — Model document schemas around real application read/write access patterns. • ✓ Compound ESR Indexing, Explain Plans & Covered Queries — Cut slow 2-second collection scans down to single-digit millisecond B-Tree lookups. • ✓ Multi-Stage Aggregation Pipelines & Multi-Document ACID Transactions — Generate live revenue analytics inside MongoDB and guarantee atomic wallet transfers. • ✓ Build, verify, and ship Module Capstone: Multi-Tenant Analytics & Inventory Engine on MongoDB Replica Sets.

9.1 Schema Design Patterns: Embedding vs Referencing & Polymorphic Docs

[65 mins • Assignment (100M) • Hands-On Lab (50M) • 2 Mock Sets • 2 AI Vivas]

Subtopics Covered: Bounded Subdocument Embedding vs ObjectId Referencing • Bucket & Computed Summary Patterns for Time-Series Data • Mongoose Schema Validation, Virtuals & Optimistic Versioning • Under-the-Hood Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle • Boundary Validation, HttpOnly rotating JWTs, Zod boundary schemas, Helmet & OWASP BOLA guards & Failure Recovery • Automated Vitest, Supertest & Playwright E2E Verification & Senior Viva Trade-Offs • Idiomatic FSWD Implementation: strict TypeScript contracts, non-blocking I/O, idempotency keys & Redis cachin... • Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle for Schema Design Patterns

Purpose: To understand and apply Schema Design Patterns: Embedding vs Referencing & Polymorphic Docs in real Full Stack MERN & TypeScript Cloud Engineering systems — specifically:...

What Topic Is Next → Next Topic 9.2: Compound ESR Indexing, Explain Plans & Covered Queries

9.2 Compound ESR Indexing, Explain Plans & Covered Queries

[65 mins • Assignment (100M) • Hands-On Lab (50M) • 2 Mock Sets • 2 AI Vivas]

Subtopics Covered: Equality–Sort–Range (ESR) Compound Index Rule • Reading .explain(\"executionStats\") (totalDocsExamined vs nReturned) • TTL Expiring Indexes & Partial Unique Indexes • Under-the-Hood Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle • Boundary Validation, HttpOnly rotating JWTs, Zod boundary schemas, Helmet & OWASP BOLA guards & Failure Recovery • Automated Vitest, Supertest & Playwright E2E Verification & Senior Viva Trade-Offs • Idiomatic FSWD Implementation: strict TypeScript contracts, non-blocking I/O, idempotency keys & Redis cachin... • Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle for Compound ESR Indexing

Purpose: To understand and apply Compound ESR Indexing, Explain Plans & Covered Queries in real Full Stack MERN & TypeScript Cloud Engineering systems — specifically: Cut slow 2-s...

What Topic Is Next → Next Topic 9.3: Multi-Stage Aggregation Pipelines & Multi-Document ACID Transactions

9.3 Multi-Stage Aggregation Pipelines & Multi-Document ACID Transactions

[65 mins • Assignment (100M) • Hands-On Lab (50M) • 2 Mock Sets • 2 AI Vivas]

Subtopics Covered: $match, $lookup, $unwind, $group & $facet Pipelines • Replica Set Sessions & Multi-Document ACID Transactions • Read Concerns, Write Concerns (majority) & Change Streams • Under-the-Hood Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle • Boundary Validation, HttpOnly rotating JWTs, Zod boundary schemas, Helmet & OWASP BOLA guards & Failure Recovery • Automated Vitest, Supertest & Playwright E2E Verification & Senior Viva Trade-Offs • Idiomatic FSWD Implementation: strict TypeScript contracts, non-blocking I/O, idempotency keys & Redis cachin... • Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle for Multi-Stage Aggregation Pipelines

Redis Caching Strategies, Distributed Locks & BullMQ Background Jobs

Production-grade Full Stack MERN & TypeScript Cloud Engineering engineering module covering Redis Caching Strategies, Distributed Locks & BullMQ Background Jobs with hands-on labs and capstone build.

Objectives: ✓ Cache-Aside, Write-Through, TTL Jitter & Stampede Protection — Slash database load by 90% on read-heavy catalogs and user profile endpoints. • ✓ Atomic Lua Sliding-Window Rate Limiting & Redlock Concurrency — Protect login, OTP, and checkout endpoints against brute-force and race conditions. • ✓

Asynchronous Background Queues, Retries & Dead-Letter Handling with BullMQ — Move slow emails, PDF invoices, and webhooks out of user-facing HTTP requests. • ✓ Build, verify, and ship Module Capstone: Distributed Job Queue, Rate Limiter & Sub-5ms Cache Layer.

10.1 Cache-Aside, Write-Through, TTL Jitter & Stampede Protection [65 mins • Assignment (100M) • Hands-On Lab (50M) • 2 Mock Sets • 2 AI Vivas]

Subtopics Covered: Cache-Aside Pattern & Targeted Tag/Key Invalidation • Randomized TTL Jitter & Single-Flight Mutex Locks • Redis Hashes, Sorted Sets (ZSET) & Leaderboards • Under-the-Hood Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle • Boundary Validation, HttpOnly rotating JWTs, Zod boundary schemas, Helmet & OWASP BOLA guards & Failure Recovery • Automated Vitest, Supertest & Playwright E2E Verification & Senior Viva Trade-Offs • Idiomatic FSWD Implementation: strict TypeScript contracts, non-blocking I/O, idempotency keys & Redis cachin... • Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle for Cache-Aside

Purpose: To understand and apply Cache-Aside, Write-Through, TTL Jitter & Stampede Protection in real Full Stack MERN & TypeScript Cloud Engineering systems — specifically: Slash...

What Topic Is Next → Next Topic 10.2: Atomic Lua Sliding-Window Rate Limiting & Redlock Concurrency

10.2 Atomic Lua Sliding-Window Rate Limiting & Redlock Concurrency [65 mins • Assignment (100M) • Hands-On Lab (50M) • 2 Mock Sets • 2 AI Vivas]

Subtopics Covered: Atomic Redis Lua Scripts for Race-Free Counters • Distributed Mutex Locks (SET NX PX) for Inventory Booking • Token Blacklisting & Instant Multi-Device Session Revocation • Under-the-Hood Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle • Boundary Validation, HttpOnly rotating JWTs, Zod boundary schemas, Helmet & OWASP BOLA guards & Failure Recovery • Automated Vitest, Supertest & Playwright E2E Verification & Senior Viva Trade-Offs • Idiomatic FSWD Implementation: strict TypeScript contracts, non-blocking I/O, idempotency keys & Redis cachin... • Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle for Atomic Lua Sliding-Window Rate Limiting

Real-Time WebSockets, Event-Driven Notifications & Collaborative State

Production-grade Full Stack MERN & TypeScript Cloud Engineering engineering module covering Real-Time WebSockets, Event-Driven Notifications & Collaborative State with hands-on labs and capstone build.

Objectives: ✓ WebSockets vs Server-Sent Events (SSE) & Authenticated Handshakes — Choose the right real-time protocol and authenticate persistent connections securely. • ✓ Horizontal Socket Scaling with Redis Pub/Sub Adapters — Broadcast real-time events across multiple load-balanced Node.js servers. • ✓ Transactional Outbox & Reliable In-App Notification Center — Guarantee real-time events and persistent unread badges never drift out of sync. • ✓ Build, verify, and ship Module Capstone: Live Multi-User Kanban & Instant Notification Hub with Socket.IO.

11.1 WebSockets vs Server-Sent Events (SSE) & Authenticated Handshakes [65 mins • Assignment (100M) • Hands-On Lab (50M) • 2 Mock Sets • 2 AI Vivas]

Subtopics Covered: Full-Duplex WebSockets vs Unidirectional HTTP SSE • JWT Handshake Verification & Per-Tenant Room Isolation • Heartbeats, Exponential Reconnection & Missed-Event Catchup • Under-the-Hood Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle • Boundary Validation, HttpOnly rotating JWTs, Zod boundary schemas, Helmet & OWASP BOLA guards & Failure Recovery • Automated Vitest, Supertest & Playwright E2E Verification & Senior Viva Trade-Offs • Idiomatic FSWD Implementation: strict TypeScript contracts, non-blocking I/O, idempotency keys & Redis cachin... • Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle for WebSockets vs Server-Sent Events (SSE)

Automated Testing (Vitest, Supertest, Playwright), Docker & Cloud CI/CD

Production-grade Full Stack MERN & TypeScript Cloud Engineering engineering module covering Automated Testing (Vitest, Supertest, Playwright), Docker & Cloud CI/CD with hands-on labs and capstone build.

Objectives: ✓ Unit & Integration Testing with Vitest, React Testing Library & Supertest — Purpose: Verify frontend components and Express APIs automatically on every Git pull request. • ✓ End-to-End Browser Automation with Playwright — Purpose: Simulate real customer signup, checkout, and dashboard journeys in headless Chromium. • ✓ Multi-Stage Dockerfiles, Compose Stacks & Non-Root Container Security — Purpose: Package React + Node.js apps into lean, reproducible Linux containers. • ✓ GitHub Actions CI/CD, Nginx TLS Reverse Proxy & Production Observability — Purpose: Automate linting, testing, container publishing, and zero-downtime HTTPS deployment.

12.1 Unit & Integration Testing with Vitest, React Testing Library & Supertest [65 mins • Assignment (100M) • Hands-On Lab (50M) • 2 Mock Sets • 2 AI Vivas]

Subtopics Covered: Testing User Behavior with React Testing Library (Not Implementation Details) • API Integration Tests Against Ephemeral MongoDB/Redis Instances • Mocking External Payment/Email Gateways Deterministically • Under-the-Hood Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle • Boundary Validation, HttpOnly rotating JWTs, Zod boundary schemas, Helmet & OWASP BOLA guards & Failure Recovery • Automated Vitest, Supertest & Playwright E2E Verification & Senior Viva Trade-Offs • Idiomatic FSWD Implementation: strict TypeScript contracts, non-blocking I/O, idempotency keys & Redis cachin... • Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle for Unit

Multi-Tenant SaaS Security, Rate-Limiting & Real-Time WebSockets

Self-explanatory list-and-bullet production mastery module covering Multi-Tenant SaaS Security, Rate-Limiting & Real-Time WebSockets in Full Stack MERN & TypeScript Cloud Engineering, paired with hands-on labs, capstone repository, Topic Mock Tests, and Spoken MockAttempt AI Viva.

Objectives: ✓ Tenant Context Isolation, Row-Level Guards & Scoped MongoDB Queries — Purpose: Prevent cross-tenant data leaks in multi-company B2B SaaS platforms using scoped middleware and indexed tenant keys. • ✓ Socket.IO / WebSockets Authenticated Rooms, Heartbeats & Redis Pub/Sub Scaling — Purpose: Broadcast live collaborative workspace updates across multiple Node.js server instances without dropped events. • ✓ Idempotency Keys, Webhook Signature Verification & Audit Trails — Purpose: Guarantee billing webhooks and state-mutating API calls never double-charge or corrupt tenant records on retries. • ✓ Build, verify, and document 'Tenant-Isolated Real-Time Notification & Sliding-Window Limiter Service' with clean Git commits and edge-case protection. • ✓ Clear 100% of Topic Timed Mock Tests and Spoken Voice + MockAttempt AI Technical Interviews.

13.1 Tenant Context Isolation, Row-Level Guards & Scoped MongoDB Queries

[65 mins • Assignment (100M) • Hands-On Lab (50M) • 2 Mock Sets • 2 AI Vivas]

Subtopics Covered: Security Hygiene & Data Safety Rules for Tenant Context Isolation, Row • Performance Optimization, Complexity & Latency Impact of Tenant Context Isolation, Row • Live Debugging, Stack • Runnable Code Implementation (TYPESCRIPT) • Hands • Idiomatic FSWD Implementation: strict TypeScript contracts, non-blocking I/O, idempotency keys & Redis cachin... • Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle for Tenant Context Isolation • Production Hardening & Security: HttpOnly rotating JWTs, Zod boundary schemas, Helmet & OWASP BOLA guards

Purpose: To understand and apply Tenant Context Isolation, Row-Level Guards & Scoped MongoDB Queries in real Full Stack MERN & TypeScript Cloud Engineering systems — specifically:...

Module 13 Hands-On Capstone Project (100 Marks): Tenant-Isolated Real-Time Notification & Sliding-Window Limiter Service — Architect, implement, test, and document 'Tenant-Isolated Real-Time Notification & Sliding-Window Limiter Service' applying every bullet-wise engineering concept from Module 13 (Multi-Tenant...

MODULE 14 OF 14 • STAGE 4 • 14 LIVE + LAB HOURS • 3 TOPICS (24 SUBTOPICS) • 1 CAPSTONE PROJECT (100 MARKS)

Full Stack Observability, Load Testing & System Design Interview Readiness

Self-explanatory list-and-bullet production mastery module covering Full Stack Observability, Load Testing & System Design Interview Readiness in Full Stack MERN & TypeScript Cloud Engineering, paired with hands-on labs, capstone repository, Topic Mock Tests, and Spoken MockAttempt AI Viva.

Objectives: ✓ OpenTelemetry Distributed Tracing Across React Fetch, Express & MongoDB — Purpose: Pinpoint exact p95 latency bottlenecks from browser click to database query in live production. • ✓ k6 Load Benchmarking, Connection Pool Sizing & Graceful Shutdowns — Purpose: Verify zero dropped HTTP requests during rolling Docker deployments and sudden traffic spikes. • ✓ Full Stack MERN Architecture Trade-Offs & Live Production Debugging — Purpose:

Solve real product-company system design scenarios, memory leak diagnostics, and stale-cache bugs confidently. • ✓ Build, verify, and document 'OpenTelemetry Full-Stack Trace Dashboard & k6 Stress-Test Harness' with clean Git commits and edge-case protection. • ✓ Clear 100% of Topic Timed Mock Tests and Spoken Voice + MockAttempt AI Technical Interviews.

14.1 OpenTelemetry Distributed Tracing Across React Fetch, Express & MongoDB [65 mins • Assignment (100M) • Hands-On Lab (50M) • 2 Mock Sets • 2 AI Vivas]

Subtopics Covered: Security Hygiene & Data Safety Rules for OpenTelemetry Distributed Tracing Across React Fetch, Express & MongoDB • Performance Optimization, Complexity & Latency Impact of OpenTelemetry Distributed Tracing Across React Fetch, Expr... • Live Debugging, Stack • Runnable Code Implementation (TYPESCRIPT) • Hands • Idiomatic FSWD Implementation: strict TypeScript contracts, non-blocking I/O, idempotency keys & Redis cachin... • Node.js 22 V8 + Libuv Event Loop, Streams & React/Next.js Full-Stack Execution & Memory Lifecycle for OpenTelemetry Distributed Tracing Across React Fetch • Production Hardening & Security: HttpOnly rotating JWTs, Zod boundary schemas, Helmet & OWASP BOLA guards

Purpose: To understand and apply OpenTelemetry Distributed Tracing Across React Fetch, Express & MongoDB in real Full Stack MERN & TypeScript Cloud Engineering systems — specifica...

Module 14 Hands-On Capstone Project (100 Marks): OpenTelemetry Full-Stack Trace Dashboard & k6 Stress-Test Harness — Architect, implement, test, and document 'OpenTelemetry Full-Stack Trace Dashboard & k6 Stress-Test Harness' applying every bullet-wise engineering concept from Module 14 (Full Stack Observa...

3. LIVE CLIENT PRODUCTION PROJECT, GLOBAL CERTIFICATIONS & CAREER SCOPE

End-of-Course Live Client Production Project + Official Internship Confirmation Letter

Project: CloudPulse Multi-Tenant B2B SaaS CRM & Automated Billing Portal • **Confirmed Role:** Full Stack MERN & Cloud Engineering Intern

Domain & Production Infra: Enterprise B2B SaaS & FinTech Client Delivery (Docker + GitHub Actions CI/CD + AWS Nginx HTTPS Production Cluster)

- Architected React 19 + TypeScript workspace dashboards with optimistic state updates and role-based access.
- Engineered Node.js + Express REST APIs with HttpOnly JWT refresh token rotation and sliding-window Redis rate limits.
- Optimized MongoDB compound indexes and aggregation pipelines for sub-50ms multi-tenant analytics.
- Implemented automated unit/integration test suites and zero-downtime Docker CI/CD deployment to live client production.

Aligned Global Vendor Certifications: **META-FE** (Meta Certified Front-End & React Developer Credential) • **JSNSD** (OpenJS Node.js Services Developer (JSNSD)) • **C100DEV** (MongoDB Certified Associate Developer) • **DCA** (Docker Certified Associate (Container Engineering))

Target Job Roles: Full-Stack MERN & TypeScript Engineer, Product Software Engineer (Full Stack), Frontend + Backend Cloud Developer, SDE-1 / SDE-2 Full Stack

Realistic Annual CTC Scope: **Fresher / Entry-Level Full-Stack SDE (0–1 Yr):** ₹6.0 LPA – ₹12.0 LPA **Mid-Level Full-Stack Product Engineer (1–3 Yrs):** ₹12.0 LPA – ₹24.0 LPA **Senior Full-Stack / Cloud Lead Architect (3–6+ Yrs):** ₹24.0 LPA – ₹46.0+ LPA
